Flow Process Development

Explore the Advantage of Flow Chemistry

If you are looking for a completely new process development or the improvement of an already established traditional batch process MicroInnova is your partner to go along. Providing process development and engineering services as well as plant solutions (delivering turnkey plants) we will definitely bring you ahead of the flow!

Four Teams Working Parallel

Four teams are working in parallel in our laboratory to generate valuable process results for our clients.

MicroInnova highlights close cooperation with customers, thus they are involved during all project steps and kept up to date constantly.

Appropriate Reactor Technology for each Application

MicroInnova is known as system integrator and applying the appropriate reactor technology for each unique process challenge is one of our core competences.

Even if we have plenty of reactor technologies available in our labs, we still increase our competences and adapt our equipment dependent on market requests with each upcoming year.

Our professional working environment leads to intensified and cost-effective processes for our partners in the chemical and pharmaceutical industries.
